DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Nightingale (US Patent No. 3747479). Nightingale discloses a syringe capable of mounting to an injector, including a barrel, plunger with a rearwardly facing drive ram engaging coupling element 72 that is knurled, a discharge tip, a conical front wall, syringe mating sections including annular flange, and an interior cavity within the coupling element 72. While a handle extends out of the barrel, the coupling element 72 does not extend out of the barrel in at least one position of the plunger. The area adapted to be within an area enveloped by a coupling mechanism (i.e., the knurled area) exhibits no discontinuity in area. See fig. 7.

Claims 1, 3-6 are rejected under 35 U.S.C. 102(b) as being anticipated by REILLY (US Patent No. 4,677,980). Reilly discloses an injector, including a barrel, plunger with a rearwardly facing drive ram engaging coupling element 156 that is knurled, a discharge tip, a conical front wall, syringe mating sections including annular flange. See figs. 2 and 17.

Claims 1, 3-7 are rejected under 35 U.S.C. 102(b) as being anticipated by DENSMORE (US Patent No. 5,007,904). Densmore discloses an injector, including a barrel, plunger with a rearwardly facing drive ram engaging coupling element that is knurled (i.e., has ridges on a

rearwardly facing projection from the plunger), a discharge tip, a conical front wall, syringe mating sections including annular flange, and a cavity. See figs. 2, 4, and 6.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-12 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 9 of U.S. Patent No. 6,196,999. Although the conflicting claims are not identical, they are not patentably distinct from each other because they each recite a plunger with a knurled rearwardly facing engaging coupling element that is for mounting to an injector within the syringe.
